

12  
Sofford. 1620.

A  
New Almanacke,  
and Prognostication,  
for the yeare of our  
LORD GOD,

1620.

*Being bissextile or Leape-yeare.*

Calculated for the Latitude  
and Meridian of the most ho-  
norable City of London, where  
the Pole is exalted 51.grad. & 32.  
min. and may very well serue  
for most parts of Great  
Brittaine.

BY

Arthur Sofford, Philomathist.

*Os homini sublimis dedit, cœlumq. videre  
Iussit, et erectos ad sidera tollere vultus.*

LONDON:

Printed for the company of

Stationers.

Vulgar Notes.

# ¶ Astronomicall Calculations for this present yeare, 1620.

THE true proceſſion of the Æquinoctiall (according to the doctrine of Copernicus & Reinholdus) is 28 de: 16 min: 26 ſec: But according to Tycho Brahe (that thrice-noble Dane) it is 28 degrees 32. mini 6. ſec.

The greateſt obliquity of the Zodiacke, is according to the Prutenicke tables 23. degrees, 28 min: 5 ſec: 48 thirds. But according to Tycho Brahe it is 23 deg. 21 min: 20 ſec.

The excentricity of the ſun by the Prutenicke tables is, 32206. parts, the totall being 1000000. But according to Tycho, it is 35878. parts the totall as before 1000000.

1620.	♂	1.	8.	49. ♄

A deſcription of the Heauens, their motions, and révolutions, as alſo the colour, magni- tude, & diſtance of the Seauen planets.

Vnder the Emperiall Heauen (which is ſuppoſed to be the habitation of the elect) is ſituate the firſt Moeable, carrying all the inferior Heauens roūd about

about from East to West, in 24 houres, by the violence of which motion, if it were not slackned by the contrary course of the inferior spheares, (it is thought of many Philosophers) that the frame of Heaven and earth would be torne in peeces, and nothing prosper or remaine, this heaven is pure and cleare without stars.

The Christalline Heaven is scituate next vnder the first Moueable, being also a cleare substance, voyd of stars, and not subiect to the sight, moving (according to the succession of the signes) one degree in 100 yeares, and accomplishing a full revolution in 36000 yeares as saith Ptolomy, but according to Alphonsus in 49000 yeares.

Next vnder the Christalline Heaven is scituate the firmament most gloriously beautified & adozned with all the fixed stars, and moueth from West to East vpon the Poles of the Eclipticke, and maketh one revolution in 25412 yeares, according to the exact obseruations of Tycho Brahe.

Of the magnitude of the fixed Starres in the Firmament, compared to the Earth.

**A**mongst the number of the fixed starres there bee sixe magnitudes, and the least is bigger then the earth, as folloiweth,

1 Starra of the first magnitude are in number 15, containing the globe of the earth 107 times.

Of the second magnitude are 45 starres, bigger then the earth 90 times.

Of the third magnitude are 208 starres, euery one of which, containe the earth 72 times.

Of the fourth magnitude are 474, euery of them being bigger then the earth 54 times.

Of the fifth magnitude are 217, euery one of them being bigger then the earth 36 times.

## A Prognostication.

Of the Sixt magnitude are 49 starres, euery one being bigger then the globe of the earth 18 times.

This Eight spheare, according to Albategenus, is distant from the earth 19000 semidiameters, or 72846000 English Myles.

Now for the Planets according to Tycho Brahe take them briefly, as followeth.

Saturne is next vnder the 8 Spheare, being of a pale leaden colour, requiring 30 yeeres to passe through the Zodiacke, he appeareth as the 28 part of the Sun, and is distant from the earth 10550 Semidiameters, or 40148700 English Myles, therefore he is bigger then the earth 22 times, their diameters bearing proportion as 31. to 11.

Iupiter within the concavity of the spheare of Saturne appeareth faire & bright, ending his reuolution in 12 yeeres, he appeareth as the 11 part of the Sun, and is distant from the earth 3990 semidiameters, or 15297660 English Myles, therefore hee is bigger then the earth 11 times, their diameters being as 12 to 5.

Mars is situate next vnder Iupiter, appearing of a fiery colour, running his course in 2 yeeres, and appeareth as the 18 part of the Sunne almost, and is distant from the earth 1745 semidiameters, or 6690330 English Myles: Therefore saith Tycho, Per cubicam numerationem terra aliquanto plus quam tredecies Marte maior, that is lesse then the earth 13 times, their diameters being as 18 to 43.

The Sun is placed in the middle of the Planets, most cleare and bright, the well-sprung of pure light, Oculus mundi, anima & cor Cœli, finishing his reuolution euery yeare, delighting (as a Gyant) to runne his course, his apparant diameter in his meane motion being 31 min: and his distance from the earth 1150 semidiameters, or 4409100 English Myles, and therefore hee is bigger then  
then

then the earth 139 times, & no more doth Tycho allow,  
their diameters being as  $5 \frac{2}{3}$  to one.

Venus vnder the spheare of the Sun, doth appeare ve-  
ry cleare and shining, being brighter then Iupiter, ending  
her reuolution as the Sun, from whom shee cannot de-  
part more then 48 deg: so that going befoze the sun, she  
is called the Morning star, and following the Sun she  
is called the Euening star, she appeareth as the 9 part  
of the sunne, and is distant from the earth as the sunne,  
therfoze she is lesser then the earth six times and  $\frac{1}{4}$  their  
diameters are as 6 to 11.

Mercury vnder the spheare of Venus appeareth some-  
what shining but not very bright, being neuer more then  
29 degrees elongated from the sunne, and therfoze sel-  
dome seene, he sheweth as the 14 part of the sun, and is  
distant as the sunne, therfoze hee is lesser then the earth  
19 times, their diameters being as 3 to 8.

The lowest of all the Planets is the Moone, running  
ouer the whole zodiacke in 27 dayes 7 howers, and 43  
min. and nere 6 seconds, her apparant diameter in her  
meane motion is 32 min. and 34 sec. her distance 60 se-  
midiameters or 230040 English miles, therfoze she is  
lesse then the earth 43 times, their diameters being as  
2 to 7. She is also lesser then the sun somewhat aboue  
5848 times, their diameters being as 1 to 18.

As touching the distances of the Planets, you must  
vnderstand that it is meant when they be in their meane  
motion, neither in their Apogeon or Perigeon, for then  
they be much further off, or farre nearer vnto vs.

PSAL. Cxi. VER. 2.

Magna opera Iehouæ, exposita omnibus qui delectantur  
illis.

Of

## A Prognostication.

Of Eclipses. 1620.

**F**IVE Eclipses shall be noted this yeare vpon the superficies of this terrestriall globe, viz. three of the sun, & two of the moone, of which, those of the sun shall not be observed with vs: but the other two of the moone in part or wholly we shall see.

The first eclipse of the sun will happen vpon the 21. day of May, at 7 of the clocke, and 40 min. afternone.

The second eclipse of the sun vpon the 20 day of June at 3 of the clocke, and 24 minuts in the morning.

The third eclipse of the sunne vpon the 14 day of November, at 3 of the clocke, and 24 min. in the morning.

But because none of these eclipses of the sun will happen vpon our Horizon (as I haue said before) I cease further to write of them.

The first eclipse of the moone will be scene with vs at London vpon the 5 day of June, 8 min. and 23 sec. before one of the clocke in the morning, at which very instant the moone shall be totally eclipsed by the interposition of the body of the earth betwene her and the sun, she being then in the 24 degree, 5 min. and 17 sec. of  $\pi$  diametrically opposed to the sun in the 24 degree, 5 min. and 17 sec. of  $\pi$ , and nere vnto the Dragons head, hauing 8 min. and 14 sec. of South-latitude ascending: she will begin to incur the shadow of the earth at 10 of the clocke, 47 min. and 58 sec. at night, of the fourth day, her body beginning to be darkened vpon the East-side, and vpon the lower part, hauing then 14 min. and one sec. of South-latitude, and at 11 of the clocke, 55 min. and 35 sec. she shall be totally deppriued of her borrowed light, and so shall continue wholly obscured for the space of one houre 52 min. and 4 sec. viz. untill one of the clocke, 47. min. and 39 sec. in the morning, of the said 5 day: and then at

Sofford. 1620:

at two of the clocke 55 min. and 16 sec. she will be quite freed from the grosse and opacuous shadow of the earth (at which time her latitude will be but 3 min. & 6 sec.) whereby the whole duration from the beginning to the ending will be 4 houres, 7 minuts, and 18 sec. the time of incident one houre, 7 min. and 37 sec. the digits eclipsed 19 and 29 minuts.

Surely this will be a wonderfull great and terrible eclipse to behold, and therefore to be coniectured that the effects thereof will be strange, but I for my part will say nothing, but what that learned Astrologian Proclus hath said, that Eclipsis Lunę in 7 ultimis decem gradibus pestem afflat, & mala inter mortales plurima.

The second eclipse of the moone being likewise a very dreadfull eclipse will be obserued of vs vpon the 29 day of Nouember at 5 of the clocke, 42 min. and 51 sec. in the afternoone, the moone being in the 18 deg. 11 min. & 45 sec. of  $\Pi$  nere vnto the Dragons taile, having 9 mi. & 48 sec. of south-latitude descending, and opposite to the sun in the 18 deg. 11 mi. & 45 sec. of  $\mathcal{P}$ . The moone will begin to be eclipsed at 3 of the clocke 47 min. and 19 sec. (which beginning we shall not see) and the end thereof will be at 7 of the clocke, 38 min. and 23 sec. so that the whole continuance from the beginning to the ending will be 3 houres, 51 min. and 4 sec. she shall be totally obscured for the space of one houre, 40 min. and 56 sec. viz. from 4 of the clocke, 52 min. & 23 sec. vntill 3: min. and 1: sec. after sixe, the time of Incident one houre, 5 min. and 4 sec. the digits eclipsed 18 & 41 min. being very nere as great as the former.

Now concerning the effects of this eclipse, marke what Proclus sayth, his words are these, Eclipsis Lunę in  $\Pi$  decem medijs gradibus repentinos exercituū motus, priuatarum, publicarumque rerum sollicitudines.

## A Prognostication.

Of a day Naturall, Equall, and Artificiall, of  
the parts, quantities, and diuersities of dayes.

A Day is twofold, naturall and artificiall : a day naturall is the space of time wherein the Equator accomplissheth one whole reuolution, according to the first moouer, and such a further portion of the arch thereof, as both answere to the daily motion of the sunne : And this day containeth alwayes 24 houres for the most part.

The Artificiall day continnes sun rising, to sun setting : and the artificiall night is from sun setting, to his rising. And you must note that this naturall day (according to diuers Writers) hath diuers beginnings : as the Romans count it from midnight to midnight, because at that time our Lord was bozne, being Sunday, and so doe we account it for fasting dayes. The Arabians begin their day at none, and end at noone the next day, for because they say the sun was made in the Meridian: and so doe all Astronomers account the day, because it alwayes falleth at one certaine time. The Vmbrians, the Tuscans, the Iewes, Athenians, Italians, and Egyptians doe beginne their day at sun-set, and so doe we celebrate Festiuall dayes. The Babilonians, Persians, and Bohemians beginne their day at sun-rising, holding till sun-setting, and so doe our Lawyers count it in England.

Iohannes de sacro Bosco diuides the Artificiall day thus into 4 quarters, calling the first Rubens, the second Splendens, the third Viens, & the fourth Tepens; whereupon the sunne is fained to haue foure Hoyles, viz. Eous, Lampas, Pyrois, an Phlegon.

The Iewes began at sun-rising, and so diuided the Artificiall day into 4 quarters, allotting to euery quarter 3 houres, whereby also they diuided the day artificiall into 12 equall parts, calling euery part an houre, and beginning

beginning at sun-rising, so that our 12 a clocke, or high  
 noone was their 6 houre, and sun-set their 12 houres: so  
 whereas the Scriptures say, The Ague left him the sea-  
 weath houre, that is, at one a clocke. So the Labourers  
 that came into the Vineyard at the 11 houre, came at  
 five of the clocke: but by this five a clocke is meant the  
 houre of the artificiall day, and not the naturall day, the  
 which is knowne according to the time of the yeare: for  
 the artificiall day is done sometime of the yeare before  
 five, &c.

**A Briefe tide Table shewing the times of full

 produceth the time of the tydes in the same Ports.

## A Prognostication.

### ⚔ Phisicall Obseruations.

**I**f thy body be filled with naughtie and superfluous humors, then were it convenient for thee to draw bloud, to the heauens consent therunto, and thy age agree therewith: which being not circumspectly weighed, it may be most dangerous to the Patient (of which no vnderstanding man is ignorant) but when necessity vrgeth, as for the Pestilence, Plurisie, Phrensie, &c. then though the heauens deny, yet a vaine is speedily to be opened, ad ægri salutem. This considered. Of Medicines, some comfortiue, and others in the meane betwixt both. Medicines purgatiue be either Soluendo, or Leniendo: In the first the moone must be in Cancer, Scorpio, or Pisces. For the other the moone must be taken when she worketh in the in moistnesse, then drynesse, being in a Trine or Sextile with Mars: and you must take heed in the houre of giuing the medicine least the moone haue any Aspect with Saturne, for he conieales the humors making the medicine worke little. Likewise, let her be free from any Aspect of Iupiter, for he is the giuer of life, the helper and comforter of the vertues: so that the medicine can but weakely expell the humors, making the body affected with an euill quality. Further in all purgatiue Medicines obserue the ensuing Rules.

The moone in Cancer, in Sextile, or Trine aspect of	Venus not combust or aspecteth in euacuating Cholles. Sol. aueraleth in purging of phlegme. Iupiter helpeth to expell melancholy.	with Electuaries.

The

Sofford. 1620.

The Moone in Scorpio in Sex- tile 02 Trine aspect of Venus, furthereth to purge choller, Venus not combust. Sol, auaieth to purg phlegm Iupiter, profiteth to purge Melancholy. } with Poti- ons.

The Moone in Pisces in a Sex- tile 02 Trine aspect of Venus, good to purge choller Venus not combust. Sol, auaieth to purge Phlegme. Iupiter, auaieth to purge Melancholy. } with Pills

### Briefe Rules of Husbandry.

Sow, set seeds, plant and graft the Moone in Taurus, Virgo, Capricorne, 02 Aquarius, & wind not easterly.

Sheare Sheep in the increase of the Moone.

Fell Timber for building, towards and in the last quarter of the Moone.

Fell fryth and Coppice for scwell in the 1. quarter.

Weld & lb cattle the moone in Aries, Sagittarius, 02 Capricorne.

Kill fat Swine for Bacon, about full Moone.

Cut Vines in February 02 March.

Remoue Trees at the last quarter, betwene Hollantide, and Twelfetide.
